## DIY Backyard Drainage

**Location:** Cambewarra NSW

### Contact from Cliff:

*Just building a house and looking at drainage options for some very wet areas that pool water. Below is the just after a trench was placed. Before the trench We had 10-15 cm of standing water where the ute is parked.*

*The slight slope of the land is into the corner where the front door is. I have access to a tractor rotary drain cleaner (made the trench in photo) and a backhoe.*

### On completion:

*Good chatting today. Here are the photos as promised. I have some others but they tend to show trenches and not the Capiphon belt. **I was impressed with how easy the installation of the belt was into the PVC pipe. The user guide was spot on and easy to follow.** As soon as we get some wet weather I will do a follow up with regards to performance in the wet weather.*

*Regards Cliff*
